Product Features :

One Time Of Boiling, Boiled Water Pour Out Only.

Step-water intake and layer by layer heating. Offer 100% pure hot boiled water always and at constant temperature on and on.

- **MCU Control System With LCD Display.**

Adopts MCU Control to set pre-set the heater operating hours for the day each day, and which days for the week. Sleep mode when you don't need the hot water, saves energy, less power usage and thus prolongs the heater's service lifespan greatly.

- **Quintuple Protection Technology And Automatic Alarming.**

When abnormal occasion occur, example electric leakage, dry heating, inflame, lid opening and steam, automatically alarm to alert the user, and the heater will switch to safety mode itself, it will shout down the main power, indicates breakdown cause and buzzing alarms to guarantee safety.

- **Ultra-Thin Dimension, A Great Leap In Design**

The thickness of the dispenser is only 190mm (less than 8 inch). The advanced step-water pour-in techniques and the layer by layer heating method successfully solve the problems of mixing boiled water with un boiled water in traditional single tank heater. It a big step forward in water heater innovation.

- **Heating Tube Self-Descaling Technique**

Adopts bottom and damping inflow designation, water scale are precipitate at the bottom. Therefore ensure dispense off boiled water is always clean and pure.
